

RETROFIT • FFS Series

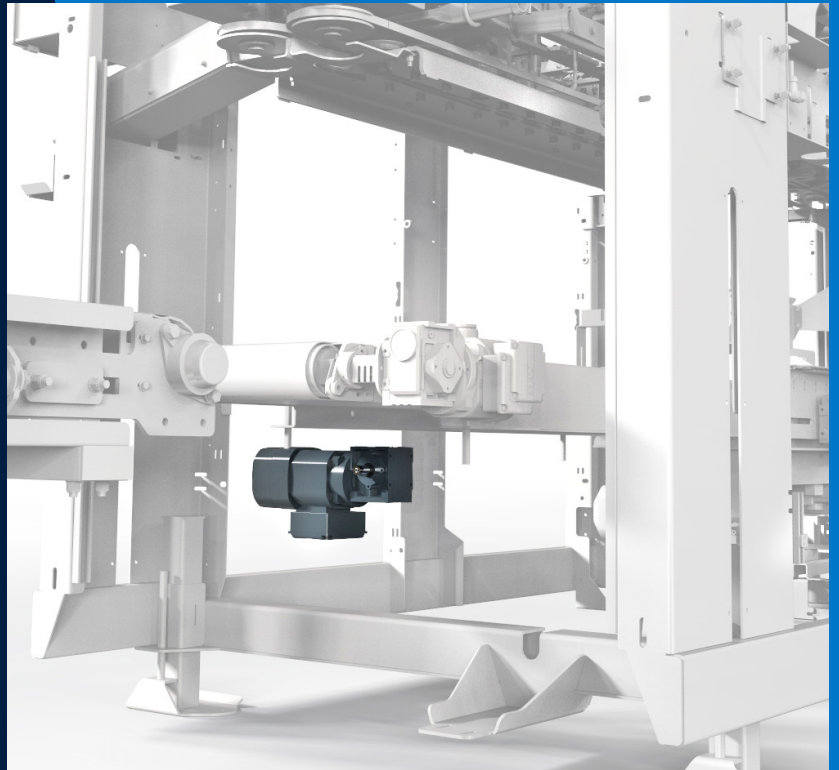

Outfeed Conveyor Height Adjustment System #62

The FFS-200 conveyor height adjustment system retrofit allows the operator to adjust the conveying system height directly through the HMI, and also reduces bag changeover time.

Faster and simpler bag changeover

Replacement main benefits

- ✓ Increased Automation
- ✓ Faster Bag Changeover

New Outfeed Conveyor Height Adjustment System Retrofit

No Manual Intervention Required

This new retrofit replaces the manual handle and is controlled directly by the operator through the HMI. It includes a gearmotor and brake which are hooked up to the actual control cabinet.

Faster Bag Changeover

With this new system, bag changeover is simpler and easier, which means greater output overall.

*Note that this retrofit is compatible with every FFS-200 before 2006.
