

RETROFIT • PTH Series

Blower replacement by venturi units

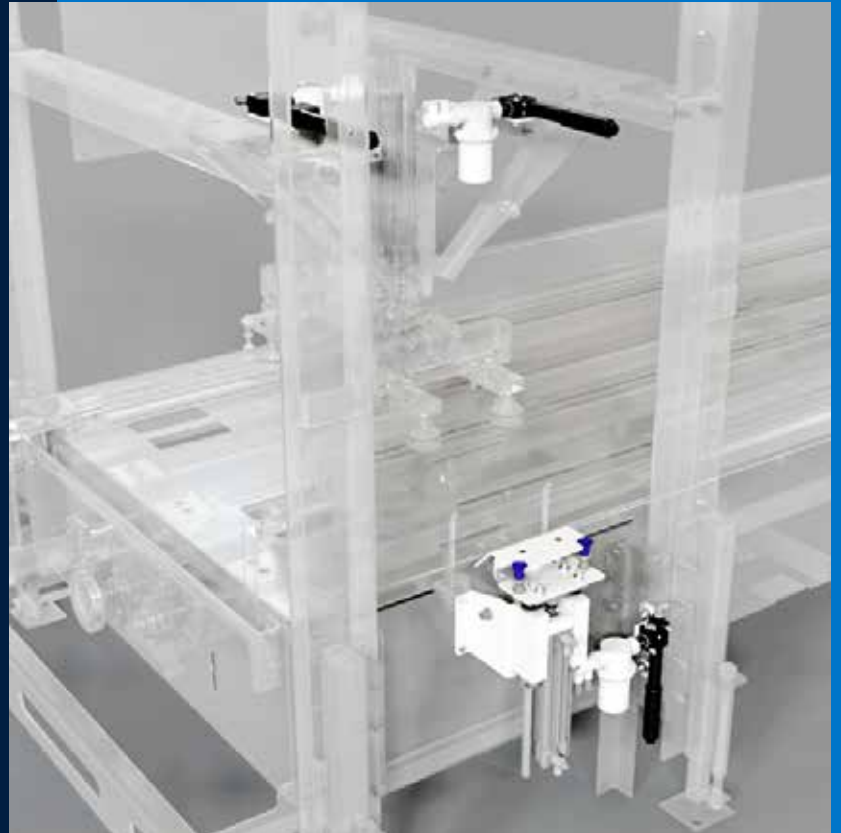

Increase your PTH bagger efficiency

Existing vacuum blowing system ports are replaced by Venturi suction cups

- ✓ Improved picking and bag opening performance
- ✓ Reduced dropped bags

Retrofit main benefits

- ✓ Improved vacuum performance
- ✓ Reduced maintenance
- ✓ Easier cleaning
- ✓ Reduced noise

Venturi Units

Better Performance

The new bag opener module allows better placement of the suction cups at the very end of the bag for better performance with wrinkled or difficult to open bags.

Lower Costs

Time and cost of maintenance are reduced by removing the blower and its main pneumatic control valve. The Venturi units are less expensive and easier to replace and if clogged, they can be cleaned in soapy water and reinstalled.

Sturdy Design

The large rubber tubing connecting the ports is replaced by a standard pneumatic hose that is less prone to cracking and leaking over time. This retrofit's simplified system and sturdier design reduces the troubleshooting and performance deterioration of the blower pneumatic valves.
