

RETROFIT • PTH Series

New Pickup Unit Design

Improve picking of your bagging equipment

The pickup unit design was completely rethought with durability and picking efficiency in mind. This new unit is easy to adjust and is compatible with all PTH versions.

Retrofit Main Benefits:

- ✓ Improved picking
- ✓ Reduced maintenance
- ✓ Improved durability

New Pickup Unit Design Retrofit

Better Design

The pneumatic hose of the new pickup unit was designed to avoid hose and fitting breakage, improving the longevity of the horizontal linear guiding system.

Improved Performance

The back suction cup moves up and down, which improves picking and minimizes the effect of the first bag bringing the second one. Smaller suction cups also improve the overall performance of the picking unit.

More Intuitive

The independent adjustment of the pickup position and the opener position makes them more intuitive to adjust. It has the same fixing point as the previous design, with the Venturi system creating a vacuum.
