

## RETROFIT • FFS Series

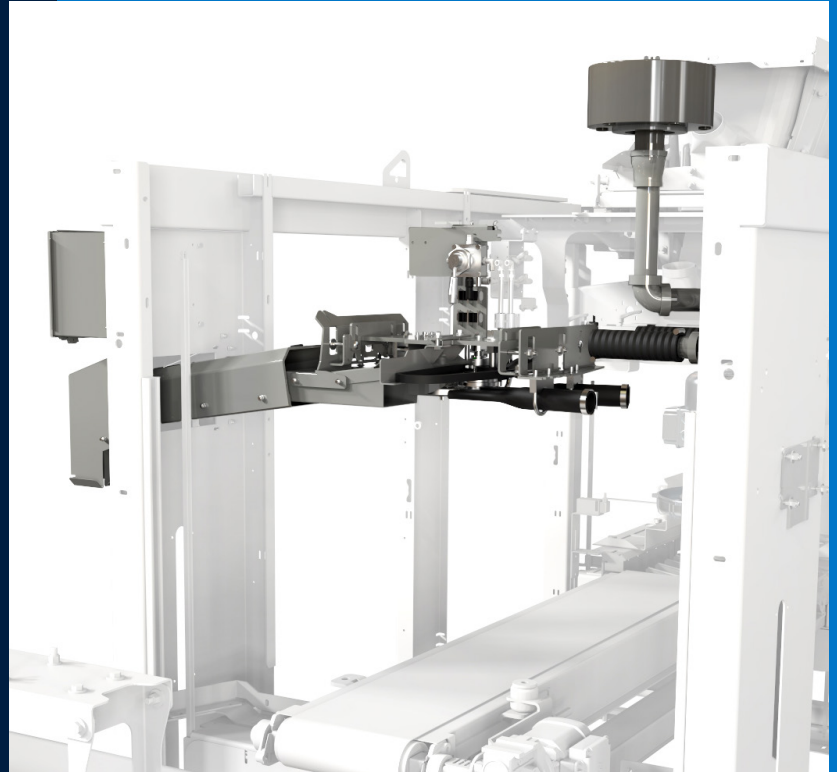

# Bag Top Trimmer

## Improve your bagging operations

The new bag top trimmer quickly removes excess trim and creates cleaner looking bags.

### Retrofit main benefits

- ✓ Better design
- ✓ Improved bag appearance
- ✓ Less downtime

## Bag Top Trimmer Retrofit

### Better Design

Previously, with the bag top trimmer located at the top sealer entry, production needed to be interrupted frequently to remove excess trim emerging too close to the ejector. This new bag top trimmer is better located at the exit of the top sealer and results in less downtime.

### Improved Performance

This new module incorporates a highly effective blowing system that constantly ejects excess trim and eliminates the risk of interruption and unnecessary downtime.

### Cleaner Looking Bags

The new bag top trimmer is able to remove excess trim in a consistent manner and produce uniform bags.

\*Note that this retrofit is not recommended for abrasive material applications.
