

RETROFIT • FFS Series

Locking Handle System (for Side Sealer and Hole Perforator Modules)

Improve your machine's stability and reduce risk of failed bags

This locking handle system retrofit kit makes handle adjustment easier and prevents friction as the driving shaft is running, reducing bag changeover time by 25% and decreasing the risk of failed bags.

Replacement main benefits

- ✓ Simpler Bag Changeover
- ✓ Increased Safety

New Top Sealer Retrofit

Simpler Bag Changeover

The new driving handle in this kit includes an embedded locking mechanism, which prevents the driving shaft from turning as the FFS is running. After positioning, it can be locked, thereby reducing bag changeover time.

Increased Safety

The new handle is automatically maintained in a lock position by a spring-loaded plunger, which the operator can pull to release. It is simple and easy to operate, meaning greater safety overall.
